Que-7 : Explain in brief about the nesting operators in emmet.

Nesting operators help to place elements with respect to other elements.

1. **Child (>) : This operator helps in nesting two or more elements using emmet.**
   Example : div>ul>li{Item1}

   ```
   <div>
   <ul>
   <li>Item1</li>
   </ul>
   </div>
   ```

2. **Sibling (+) : The elements are positioned at the same level using + operator.**
   Example : header+main+footer

   ```
   <header></header>
   <main></main>
   <footer></footer>
   ```

3. **Multiplication (*) : Using this operator one can define how many times the result is to be outputted.**
   Example : ul>li*5

   ```
   <ul>
   <li></li>
   <li></li>
   <li></li>
   <li></li>
   <li></li>
   </ul>
   ```
